1. Laptop Products

Model	Processor	RAM	Storage	Display	Price (Rs.)
Dell Inspiron 15 3520	Intel i5 12th Gen	8GB DDR4	512GB SSD	15.6" FHD	52,990
Dell Inspiron 15 3520	Intel i5 12th Gen	16GB DDR4	512GB SSD	15.6" FHD	62,990
HP Pavilion 14-eh1	Intel i5 12th Gen	8GB DDR4	512GB SSD	14" FHD	57,990
HP 15s-eq2	AMD Ryzen 5 5500U	8GB DDR4	512GB SSD	15.6" FHD	44,990
Lenovo IdeaPad Slim 3	Intel i3 12th Gen	8GB DDR4	256GB SSD	15.6" FHD	35,990
Lenovo IdeaPad Slim 5	AMD Ryzen 5 7530U	16GB DDR4	512GB SSD	15.6" FHD	58,990
Asus VivoBook 15	Intel i5 11th Gen	8GB DDR4	512GB SSD	15.6" FHD	48,990
Acer Aspire 5	AMD Ryzen 3 5300U	8GB DDR4	256GB SSD	15.6" FHD	36,990
MSI Modern 14	Intel i5 12th Gen	16GB DDR4	512GB SSD	14" FHD IPS	64,990
Apple MacBook Air M1	Apple M1 Chip	8GB	256GB SSD	13.3" Retina	92,990

Desktop & Accessories

Product	Specifications	Price (Rs.)
Assembled Desktop (Basic)	Intel i3, 8GB RAM, 1TB HDD, No OS	18,500
Assembled Desktop (Mid)	Intel i5, 8GB RAM, 256GB SSD + 1TB HDD	28,500
Assembled Desktop (High)	Intel i7, 16GB RAM, 512GB SSD + 1TB HDD	45,000
HP All-in-One 22	Intel i3, 4GB RAM, 1TB HDD, 21.5" Display	35,990
Dell OptiPlex 3000	Intel i5 12th Gen, 8GB, 256GB SSD	42,990
Gaming PC (Custom Build)	Ryzen 5, RTX 3060, 16GB, 512GB SSD	75,000

Components & Upgrades

Component	Options Available	Price Range (Rs.)
RAM (DDR4)	4GB / 8GB / 16GB / 32GB	1,200 – 6,500
SSD (SATA)	120GB / 240GB / 512GB / 1TB	1,500 – 6,000
SSD (NVMe M.2)	256GB / 512GB / 1TB	2,200 – 7,500
HDD (Laptop)	500GB / 1TB / 2TB	1,800 – 3,500
HDD (Desktop)	1TB / 2TB / 4TB	2,500 – 5,000
Laptop Battery	Compatible for Dell/HP/Lenovo/Asus	1,500 – 3,500
Laptop Charger	All brands available	600 – 1,800

Component	Options Available	Price Range (Rs.)
Laptop Screen	14" / 15.6" FHD panels	3,000 – 7,000
Keyboard (Laptop)	Brand-specific replacements	800 – 2,500
Processor Cooler	Intel/AMD compatible	500 – 2,000
SMPS (Desktop)	450W / 550W / 650W	1,200 – 3,000
Graphics Card	GT 710 / GTX 1650 / RTX 3060	4,500 – 28,000
Wi-Fi Adapter (USB)	USB 2.4GHz/5GHz Dual Band	350 – 900
External HDD	1TB / 2TB Portable	3,500 – 6,500
USB Pendrive	16GB / 32GB / 64GB / 128GB	250 – 900
Monitor	19" / 21.5" / 24" FHD LED	7,500 – 18,000
Keyboard + Mouse Combo	Wired / Wireless	400 – 2,200
Webcam	720p / 1080p	800 – 2,500
Headset	Basic / Gaming	350 – 3,000
UPS	600VA / 1KVA	2,000 – 4,500

2. Service & Repair Charges

Service Description	Charge (Rs.)
OS Installation (Windows 11) – Clean install with drivers	500
OS Installation (Windows 10) – Clean install with drivers	400
OS Re-installation – Reinstall keeping data	400
Driver Installation – All hardware drivers	200
Software Installation Pack – MS Office, browsers, utilities	300
Antivirus Installation – With 1-year licence	800
Virus / Malware Removal – Full system clean	400
Data Backup – Up to 100GB to external drive	300
Data Recovery (HDD) – Logical recovery	1,000 – 3,000
Data Recovery (SSD) – Chip-level recovery	2,000 – 5,000
RAM Upgrade (Labour) – Installing customer-supplied RAM	200
SSD Upgrade (Labour) – Installing + OS transfer	400
HDD Replacement (Labour) – Labour only	300
Laptop Screen Replacement – Labour + screen cost extra	800
Laptop Keyboard Replacement – Labour + keyboard cost extra	500
Laptop Charging Port Repair – Soldering/replacement	500 – 1,200
Laptop Battery Replacement – Labour + battery cost extra	300
Laptop Hinge Repair – Both hinges	600 – 1,500

Service Description	Charge (Rs.)
Laptop Touchpad Repair – Cleaning or replacement	400 – 800
DC Jack Repair – Power jack replacement	600
Motherboard Repair (Basic) – Chip-level diagnosis + repair	500 – 3,000
Overheating Fix – Thermal paste + fan cleaning	400
Laptop Fan Replacement – Labour + fan cost extra	400
Desktop Servicing – Full clean + thermal paste	500
CMOS Battery Replacement – Desktop/Laptop	200
Network Setup (Home) – Router configuration + Wi-Fi	500
Network Setup (Office) – Up to 5 systems	1,500
Printer Setup & Driver – USB or Wi-Fi printer	300
Annual Maintenance Contract – Per system per year	2,000
Remote Support (1 session) – TeamViewer / AnyDesk	300

** Labour charges are separate from parts cost. Final price may vary based on diagnosis.*

** Warranty: 30 days on all repair work. 6 months on parts supplied by us.*

3. Frequently Asked Questions (FAQ)

Q: How much RAM do I need for normal use?

A: 8GB RAM is sufficient for everyday tasks like browsing, MS Office, video calls, and YouTube. If you use heavy software like Photoshop, video editing, or multiple applications simultaneously, 16GB is recommended.

Q: What is the difference between SSD and HDD?

A: SSD (Solid State Drive) is much faster than HDD (Hard Disk Drive). An SSD boots Windows in 10–15 seconds while HDD takes 40–60 seconds. SSD is more durable, silent, and consumes less power. HDD is cheaper per GB. We always recommend SSD for laptops.

Q: Which laptop brand is the best?

A: All major brands — Dell, HP, Lenovo, Asus, and Acer — are reliable. Dell and HP are known for build quality and after-sales service. Lenovo has good keyboards. Asus offers value for money. The best choice depends on your budget and usage.

Q: How long does a laptop repair take?

A: Most software repairs (OS installation, virus removal) are done same day within 2–4 hours. Hardware repairs like screen or keyboard replacement take 1–2 days. Motherboard repairs may take 2–3 days depending on parts availability.

Q: Do you provide warranty on repairs?

A: Yes. We provide 30-day warranty on all repair work. If the same issue recurs within 30 days, we fix it free of charge. Parts supplied by us carry 6-month warranty.

Q: Can you recover my data if my hard disk failed?

A: Yes, we offer data recovery services. For logical failures (software/corruption), success rate is 85–90% and cost is Rs.1000–3000. For physical failures (clicking sounds, not detected), we send it to specialists and cost is Rs.2000–5000. We always try data recovery before any format.

Q: What is the difference between i3, i5, and i7 processors?

A: Intel i3 is entry-level — good for basic tasks like browsing and MS Office. Intel i5 is mid-range — handles multitasking, coding, light gaming. Intel i7 is high-performance — ideal for video editing, heavy gaming, and professional software. For students and office use, i5 is the sweet spot.

Q: Should I buy a laptop or desktop?

A: Buy a laptop if you need portability — travel, college, work from different locations. Buy a desktop if you need maximum performance for the price, easy upgradability, and will always work from one place. Desktops give better specs for the same price.

Q: My laptop is running very slow. What should I do?

A: Common solutions: 1) Restart the laptop, 2) Run Disk Cleanup, 3) Disable unnecessary startup programs via Task Manager, 4) Check if antivirus is running a scan, 5) Upgrade from HDD to SSD (biggest improvement), 6) Add more RAM if below 8GB, 7) Check for malware.

Q: Can you upgrade my old laptop?

A: Yes, most laptops can be upgraded. The most impactful upgrades are: SSD upgrade (makes the biggest speed difference), RAM upgrade (from 4GB to 8GB or 8GB to 16GB), and sometimes battery replacement. Bring your laptop for a free assessment.

Q: Do you buy old laptops?

A: Yes, we buy old laptops and offer exchange. Bring your old laptop with charger for evaluation. We assess the condition and offer a fair price which you can use as a discount on a new purchase.

Q: What payment methods do you accept?

A: We accept Cash, UPI (GPay, PhonePe, Paytm), Debit/Credit Cards, and bank transfer. EMI options are available on purchases above Rs.15,000 through select banks.

Q: Do you offer home service?

A: Yes, we offer home service within Salem city for an additional visit charge of Rs.200–500 depending on location. Home service is available for desktop setup, networking, and basic troubleshooting.

Q: Is it worth repairing an old laptop?

A: If repair cost is less than 30–40% of the laptop's current market value, repair is usually worthwhile. For example, if a laptop is worth Rs.20,000 now and the repair costs Rs.6,000 or less, repair makes sense. We give free diagnosis to help you decide.

Q: How do I know if my laptop needs more RAM?

A: Signs you need more RAM: laptop slows down with multiple browser tabs open, programs take long to load, you hear constant hard drive activity, Task Manager shows RAM usage above 80% regularly. Upgrading from 4GB to 8GB gives a very noticeable speed improvement.

4. Common Problems & Troubleshooting

Problem: Laptop not turning on

1. Check if battery is charged — connect charger and wait 5 minutes.
2. Try pressing power button for 10 seconds (force shutdown reset).
3. Remove battery, hold power button 30 seconds, reinsert battery.
4. Check if charging LED lights up when charger is connected.
5. Try a different power outlet or charger.
6. If still not working, likely a motherboard or power IC issue — bring for diagnosis.

Problem: Laptop screen is black but running

1. Press Windows + P to change display mode.
2. Connect external monitor to check if display works.
3. Try adjusting brightness using Fn + brightness keys.
4. Restart the laptop (hold power 10 seconds).
5. If black only sometimes — likely loose display cable.
6. If always black — screen or graphics card issue.

Problem: Wi-Fi not connecting

1. Turn Wi-Fi off and on again using Fn key or Settings.
2. Restart the router and laptop.
3. Forget the network and reconnect.
4. Check if other devices connect to the same Wi-Fi.
5. Update Wi-Fi driver from Device Manager.
6. Run network troubleshooter: Settings > Troubleshoot > Network.
7. If no Wi-Fi card detected — driver or hardware issue.

Problem: Laptop overheating and shutting down

1. Clean the laptop vents with compressed air.
2. Use the laptop on a hard flat surface — not on bed/pillow.
3. Check Task Manager for programs using 100% CPU.
4. Update graphics and system drivers.
5. Apply new thermal paste on processor (bring to shop).
6. Consider a cooling pad.
7. Fan replacement may be needed if fan is not spinning.

Problem: Blue Screen of Death (BSOD)

1. Note the error code shown on the blue screen.
2. Restart — if it was a one-time crash, may be fine.
3. Run Windows Memory Diagnostic to check RAM.
4. Run sfc /scannow in Command Prompt as administrator.
5. Check if new hardware or driver was recently installed.
6. Common causes: bad RAM, failing HDD/SSD, driver conflict.
7. If frequent — bring laptop for full diagnosis.

Problem: Laptop keyboard not working

1. Restart the laptop first.
2. Check if specific keys or all keys are not working.
3. Clean keyboard with compressed air (dust under keys).
4. Check Device Manager for keyboard driver errors.
5. Try external USB keyboard to isolate the issue.
6. If liquid was spilled — turn off immediately and bring for service.
7. Keyboard replacement cost: Rs.800–2500.

Problem: Hard disk making clicking noise

1. STOP using the laptop immediately.
2. Clicking sound means the HDD is physically failing.
3. Backup your data urgently if you can still access it.
4. Do NOT run chkdsk or format — it may worsen data loss.
5. Bring to shop for data recovery before any other action.
6. HDD replacement will be needed after data recovery.

Problem: Laptop battery draining very fast

1. Check Battery Report: run 'powercfg /batteryreport' in CMD.
2. Reduce screen brightness.
3. Disable Bluetooth and Wi-Fi when not needed.
4. Close unnecessary background apps.
5. Change Power Plan to Balanced (not High Performance).
6. Check battery health — if below 40% design capacity, replace battery.
7. Battery replacement cost: Rs.1500–3500.

Problem: Computer running slow after Windows update

1. Wait 1–2 hours after update for background processes to finish.
2. Restart the computer.
3. Check Disk Usage in Task Manager — if 100% wait for it to settle.
4. Disable SysMain (Superfetch) service if HDD is always at 100%.
5. Run Disk Cleanup including Windows Update cleanup.
6. Consider upgrading to SSD if still on HDD.

Problem: No sound from laptop speakers

1. Check if volume is muted (speaker icon in taskbar).
2. Right-click speaker icon > Open Sound Settings.
3. Check if correct output device is selected.
4. Try plugging and unplugging headphones.
5. Update audio driver from Device Manager.
6. Run audio troubleshooter in Windows Settings.
7. If driver reinstall doesn't help — audio chip issue on motherboard.

5. Microsoft Excel – Installation & Troubleshooting

Q: How do I install Microsoft Excel / MS Office on my computer?

A: Purchase a genuine MS Office licence (Office 2021 or Microsoft 365) from us or online. Download the installer from office.com/setup using your product key. Sign in with a Microsoft account, enter the key, and click Install. Run the downloaded .exe file and follow on-screen instructions. Installation takes 10–20 minutes. We also offer pre-installed Office on new laptops for Rs.300 (software install charge).

Q: What is the difference between MS Office 2021 and Microsoft 365?

A: MS Office 2021 is a one-time purchase — you own it permanently but get no feature updates. Microsoft 365 is a yearly/monthly subscription that always gives you the latest version, 1TB OneDrive cloud storage, and multi-device support. For home users, Office 2021 is more economical. For businesses needing cloud access and updates, Microsoft 365 is better.

Q: Excel says 'Product Activation Failed'. How do I fix it?

A: This means your Office licence is not activated. Steps to fix:

- Open any Office app > click Activate Product.
 - Sign in with the Microsoft account linked to your licence.
 - If using a product key, go to office.com/setup and enter the key.
 - Check internet connection — activation requires internet.
 - If the key was already used on another PC, contact Microsoft support.
 - We can assist with activation for a Rs.200 service charge.
-

Q: Excel is opening very slowly. What can I do?

A: Common fixes for slow Excel:

- Disable unnecessary Add-ins: File > Options > Add-ins > Manage > Go > uncheck unused add-ins.
 - Clear conditional formatting from large ranges — it slows recalculation.
 - Change calculation to Manual: Formulas > Calculation Options > Manual (press F9 to recalculate).
 - Delete unused rows/columns — select last used row, Ctrl+Shift+End, delete empties.
 - Reduce volatile functions like NOW(), TODAY(), INDIRECT() in large sheets.
 - Save as .xlsx instead of .xls (old format is slower).
 - Upgrade RAM to 8GB+ if below that.
-

Q: Excel file is not opening — shows 'File format or extension is not valid'.

A: This error usually means the file is corrupted or the extension is wrong. Try these steps:

- Open Excel > File > Open > Browse > select the file, click the dropdown arrow next to Open > 'Open and Repair'.
 - Try renaming the file extension from .xlsx to .xls or vice versa.
 - If the file was emailed, re-download it — it may have been corrupted during transfer.
 - Use a previous auto-recover version: File > Info > Manage Workbook > Recover Unsaved Workbooks.
 - We offer file recovery service for Rs.300–500.
-

Q: How do I fix 'Excel has stopped working' or keeps crashing?

A: Steps to resolve Excel crashes:

- Update MS Office: File > Account > Update Options > Update Now.
 - Repair Office: Control Panel > Programs > MS Office > Change > Quick Repair.
 - Disable hardware acceleration: File > Options > Advanced > uncheck 'Disable hardware graphics acceleration'.
 - Start Excel in Safe Mode: Press Win+R, type 'excel /safe', press Enter — if it works, an add-in is the problem.
 - Delete Excel's temp files: %appdata%\Microsoft\Excel.
 - Reinstall Office if problem persists.
-

Q: Excel formulas are not calculating automatically.

A: This is usually because Calculation Mode is set to Manual. Fix it:

- Go to Formulas tab > Calculation Options > select Automatic.
 - Or press Ctrl+Alt+F9 to force recalculate all sheets.
 - If a cell shows the formula text instead of result, the cell is formatted as Text — change it to General and press F2, Enter to refresh.
 - Check if the formula starts with a space before '=' — remove it.
-

Q: How do I recover an Excel file that was closed without saving?

A: Excel has auto-recover. Try these steps:

- Open Excel > File > Info > Manage Workbook > Recover Unsaved Workbooks.
 - Or navigate to: C:\Users\[YourName]\AppData\Local\Microsoft\Office\UnsavedFiles.
 - Enable AutoSave for future: File > Options > Save > check 'Save AutoRecover info every X minutes'.
 - If the file was overwritten, we can attempt data recovery for Rs.500–1000.
-

Q: Excel print preview does not match the printout. How to fix?

A: To fix print layout issues:

- Use Print Preview (Ctrl+P) and set correct paper size (A4 is most common in India).
- Go to Page Layout tab > set Margins, Orientation, and Scaling.
- Use 'Fit Sheet on One Page' in Scaling if content is getting cut off.
- Check printer driver — update it from Device Manager or manufacturer website.
- Set the print area manually: select the range > Page Layout > Print Area > Set Print Area.

Q: How do I password-protect an Excel file?

A: To protect your Excel file:

- Go to File > Info > Protect Workbook > Encrypt with Password.
- Enter a strong password and confirm. Save the file.
- To protect only a sheet: Review tab > Protect Sheet > set password.
- IMPORTANT: If you forget the password, data may be unrecoverable. Keep a backup.
- We can help remove forgotten Excel passwords for Rs.500.

Q: Excel shows '#VALUE!', '#REF!', '#DIV/0!' errors. What do they mean?

A: Common Excel error codes explained:

- #VALUE! — Wrong data type in formula (e.g. adding text to a number). Check cell contents.
- #REF! — Formula refers to a deleted or moved cell. Check if rows/columns were deleted.
- #DIV/0! — Formula is dividing by zero or empty cell. Use =IFERROR(formula, 0) to handle it.
- #NAME? — Excel doesn't recognise the function name. Check spelling of the function.
- #N/A — VLOOKUP or MATCH cannot find the value. Verify the lookup value exists in the range.
- #NUM! — Invalid numeric value (e.g. square root of a negative number).
- ##### — Column is too narrow to display the value. Widen the column.

Q: How do I uninstall and reinstall Excel / MS Office?

A: To uninstall: Control Panel > Programs > Uninstall a Program > select Microsoft Office > Uninstall.

Then restart the computer. To reinstall:

- Download the installer from office.com/setup.
- Sign in with your Microsoft account and click Install.
- If you have a product key, enter it at setup.
- We offer complete Office uninstall + reinstall service for Rs.300.

Common Excel Error Problems & Fixes

Problem: Excel not responding when opening large files

1. Close all other open applications to free RAM.
2. Disable all add-ins: File > Options > Add-ins > Manage COM Add-ins > uncheck all.
3. Open the file in Safe Mode: Win+R > type 'excel /safe' > open the file.
4. Split large files into smaller workbooks if possible.
5. Upgrade RAM to 16GB if file has 100,000+ rows.
6. Save as Binary Workbook (.xlsb) — much faster for large data.
7. If still failing — bring to shop for file repair service.

Problem: Excel macro / VBA code not running

1. Enable Macros: File > Options > Trust Center > Trust Center Settings > Macro Settings > Enable all macros.
2. Check if the file is saved as .xlsm (macro-enabled format).
3. Check if macro name has spaces or special characters — rename it.
4. If 'Macro not found' error — check the correct sheet/module is referenced.
5. Press Alt+F11 to open VBA editor and check for red error lines.
6. We offer Excel macro creation and debugging for Rs.500–2000 depending on complexity.

6. Tally Prime – Installation & Troubleshooting

Q: How do I install Tally Prime on my computer?

A: Steps to install Tally Prime:

- Download the installer from tallysolutions.com (official site only).
- Run the .exe installer as Administrator.
- Choose installation path (default: C:\Program Files\TallyPrime).
- After install, open Tally — it runs in Educational Mode without a licence.
- To activate, connect the Tally USB dongle or enter your licence credentials.
- Minimum requirements: Windows 10/11, 4GB RAM, 1GB free disk space.
- We offer Tally installation and activation for Rs.500.

Q: What is the difference between Tally ERP 9 and Tally Prime?

A: Tally ERP 9 is the older version (now discontinued for new sales). Tally Prime is the latest version with a completely redesigned interface, faster navigation, Go To feature for quick access, improved reports, and better multi-user experience. If you are on ERP 9, you can upgrade to Prime using your existing licence. We assist with upgrades at Rs.300 service charge.

Q: Tally shows 'Licence not found' or 'Dongle not detected'. How to fix?

A: Steps to resolve licence issues:

- If using USB dongle — remove and re-insert it. Try a different USB port.
- Check Device Manager for dongle recognition (should appear under USB devices).
- Install/reinstall Sentinel dongle driver from Tally support site.
- If using online licence — check internet connection and firewall settings.
- Run Tally as Administrator (right-click > Run as Administrator).
- If the dongle LED is not glowing, the dongle may be damaged — bring for inspection.
- Contact Tally support at 1800-889-9999 (toll-free) if licence is server-based.

Q: Tally data is not opening — shows 'Data directory not found' or corruption error.

A: Steps to recover Tally data:

- Note the Tally data folder path (usually C:\TallyPrime\Data or a custom path).
- In Tally, press F12 > Configure > Data Path — verify the correct path is set.
- If the data folder exists, use Tally's built-in repair: press Alt+F3 > Alter > Rewrite Company.
- Take a backup immediately using Alt+F3 > Backup before any repair.
- Check if data files are there: 0000.900, Company.900 should be present.
- We offer Tally data recovery and repair for Rs.500–2000.

Q: How do I take a backup of Tally data?

A: To backup Tally data:

- Open Tally > press Alt+F3 > select Backup.
 - Choose the destination (USB drive or a different folder).
 - Select the company and click Enter to backup.
 - Alternatively, manually copy the entire Tally Data folder (e.g. C:\TallyPrime\Data) to a USB drive or cloud storage.
 - Schedule daily backups before shutting down.
 - We recommend keeping backups on an external drive — we sell 1TB externals for Rs.3500.
-

Q: Tally is running very slowly. How can I speed it up?

A: Steps to improve Tally performance:

- Split company data yearly: Alt+F3 > Split Company Data — keeps current year data lean.
 - Increase RAM to 8GB+ — Tally benefits greatly from more RAM.
 - Move Tally Data folder to SSD if currently on HDD.
 - Disable unnecessary Tally add-ons/TDL files if installed.
 - Avoid keeping too many vouchers un-posted — post them regularly.
 - Run Rewrite on company data: Alt+F3 > Alter > Rewrite to fix internal data issues.
 - Keep Windows updated and run Disk Cleanup regularly.
-

Q: How do I migrate/transfer Tally data to a new computer?

A: To transfer Tally data to a new PC:

- On old PC: backup data (Alt+F3 > Backup) or copy the entire Data folder.
 - Install Tally Prime on the new computer.
 - Copy the backed-up data folder to the new PC's Tally Data path.
 - In Tally on new PC: press Alt+F3 > Restore or point Data Path to copied folder.
 - Transfer the USB dongle to the new computer.
 - Test by opening a company and checking the last few vouchers.
 - We provide Tally migration service for Rs.500.
-

Q: Tally shows 'Port already in use' or won't open at all.

A: Port conflict or process issue — try these fixes:

- Open Task Manager > Processes > look for Tally.exe — if found, end the task.
 - Restart the computer — this clears any stuck Tally process.
 - Check if another instance of Tally is already running on the same machine.
 - If Tally Server is used, check if the server service is running on the host PC.
 - Change Tally port: F12 > Configure > Client/Server > change from 9000 to 9001.
 - Temporarily disable firewall/antivirus and try opening Tally.
-

Q: How do I enable multi-user (client-server) mode in Tally Prime?

A: To set up Tally in multi-user mode:

- Install Tally Prime on the server (main) computer with a multi-user licence.
 - Start Tally in Server Mode: run TallyPrime Server from the Start Menu.
 - On each client PC, install Tally Prime.
 - On client: F12 > Configure > Client/Server > set Server Name to the server's IP address.
 - Ensure all PCs are on the same network and firewall allows Tally port (default 9000).
 - We set up Tally multi-user networks for Rs.1500 (up to 5 systems).
-

Q: GST returns are not generating correctly in Tally. What should I check?

A: Common GST issues and fixes in Tally Prime:

- Verify GST number is correctly entered: F11 > GST Registration Details.
- Check that all ledgers have correct GST classification (CGST/SGST/IGST).
- Ensure invoice date matches the return period — post-dated vouchers cause mismatches.
- Run GSTR-1/GSTR-3B report: Gateway > GST Reports and check for mismatches.
- Reconcile Tally GST data with GSTN portal data using the reconciliation feature.
- Update Tally to the latest version — GST rule changes are released via updates.
- We offer Tally GST reconciliation and filing assistance — contact us for pricing.

Q: Tally error: 'Memory Access Violation' or Tally crashes mid-entry.

A: This is typically a data corruption or hardware issue:

- First, take a full backup of Tally data before doing anything.
- Rewrite the company data: Alt+F3 > Alter Company > Rewrite.
- Update Tally to the latest release from tallysolutions.com.
- Run Windows Memory Diagnostic — bad RAM can cause Tally crashes.
- Check hard disk health: run chkdsk /f /r from Command Prompt as Admin.
- If on HDD, migrate to SSD — Tally is very sensitive to slow disk performance.
- Contact us if rewrite fails — we offer deep Tally data repair for Rs.1000–3000.

Q: How do I update Tally Prime to the latest version?

A: To update Tally Prime:

- Open Tally > Help > Update Tally Prime — it checks for updates automatically.
- Or download the latest installer from tallysolutions.com and run it — existing data is not affected.
- Always take a data backup before updating.
- Ensure your Tally Software Service (TSS) subscription is active to get updates.
- If TSS has expired, you can renew it through an authorised Tally partner.
- We assist with Tally TSS renewal and updates — contact us for current pricing.

Common Tally Error Problems & Fixes

Problem: Tally data folder accidentally deleted

1. Stop all activity immediately — do NOT install new software on that drive.
2. Check the Recycle Bin first — restore if found.
3. If not in Recycle Bin, use file recovery software (Recuva).
4. Do not write new data to the drive — this lowers recovery chances.
5. Bring the hard disk/laptop to us for professional recovery.
6. Data recovery from deleted Tally folder: Rs.500–2000.
7. After recovery, set up automatic daily backup to prevent future loss.

Problem: Tally voucher entries are duplicated after restore

1. This happens when the same backup is restored over existing data.
2. Always restore to a fresh/empty Data folder to avoid duplicates.
3. To identify duplicates: run Day Book report and sort by voucher number.
4. Use Tally's optional voucher deletion if duplicates are recent.
5. Contact us for data cleaning assistance if duplicates are widespread.
